### **EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.
2. Authorization for this examiner's amendment was given in a telephone interview with Douglas Hamilton on 20 January 2006.
3. The application has been amended as follows:
  - In claim 26, line 1, "A device" was deleted and –An implantable cardiac rhythm device— was inserted.
  - In claim 27, line 1, "The device" was deleted and –The implantable cardiac device— was inserted.
  - In claim 28, line 1, "The device" was deleted and –The implantable cardiac device— was inserted.
  - In claim 29, line 1, "The device" was deleted and –The implantable cardiac device— was inserted.
  - In claim 30, line 1, "The device" was deleted and –The implantable cardiac device— was inserted.
  - In claim 31, line 1, "The device" was deleted and –The implantable cardiac device— was inserted.
  - In claim 32, line 1, "The device of claim 26" was deleted and –The implantable cardiac device of claim 27— was inserted.

Art Unit: 3766

- In claim 34, line 5, immediately after “housing; and wherein placing,” “the” was deleted and –an— was inserted.
- In claim 34, line 6, immediately after “...external programmer”, “relation to the displayed medical device includes placing the external programmer in” was deleted.

4. The following is an examiner's statement of reasons for allowance:

With the changes made by the examiner with the authorization of the attorney, there is no prior art that includes all of the features of the claims. Namely, an implantable medical device that includes an inverted-f-shaped antenna on the exterior of the housing, and also a coating covering a portion of the housing and the antenna, is neither taught nor obvious at the time of the invention.

Planar antennas, and specifically planar inverted-f antennas (PIFA), are common in the art of RF communication. Portable radios such as disclosed by Sekine et al (U.S. 5,517,676) use inverted-f antennas for receiving and transmitting data via a feed line that connects to internal circuitry. Patch antennas such as those used by Villaseca et al (U.S. 6,240,317) and microstrip RF telemetry antennas such as those taught by Sun et al (U.S. 5,861,019) are used in implantable medical devices. However, at the time of the invention, it was not taught or obvious for an implantable medical device with a biocompatible coating to utilize an inverted-f antenna.

5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

U.S. 4,851,855 to Tsukamoto et al, disclosing Planar antenna

U.S. 6,675,045 to Mass et al, disclosing Split-can dipole antenna for an implantable medical device
